Hello, Jeff Wagg here...

As I write this, we are in the Galapagos, having just come back from a trip ashore to investigate marine iguanas, Galapagos sea lions, and Sally Lightfoot crabs. You'll be hearing a lot more about your adventures in the near future, but let's just say this up front.. it appears Darwin was right. And this is truly an AMAZING adventure.

Randi asked me to tell you all that due to his adventures below the equator, he will not be writing a SWIFT this week. Instead, he will be taking in the wonders of this unique place so that he might regale you with tales of vampire finches and lava lizards in future editions.

Hello, Jeff Wagg here...

As I write this, we are in the Galapagos, having just come back from a trip ashore to investigate marine iguanas, Galapagos sea lions, and Sally Lightfoot crabs. You'll be hearing a lot more about your adventures in the near future, but let's just say this up front.. it appears Darwin was right. And this is truly an AMAZING adventure.

Randi asked me to tell you all that due to his adventures below the equator, he will not be writing a SWIFT this week. Instead, he will be taking in the wonders of this unique place so that he might regale you with tales of vampire finches and lava lizards in future editions.

However, we do have one important piece of business to discuss. Robert S. Lancaster, creator of http://www.stopkaz.com and http://www.stopsylvia.comhas recently had a stroke and is recovering in the hospital. His prognosis is good, but he has a long road ahead of him both physically and financially. The JREF has promised to help spread the word and try to garner as much support as possible from the skeptic community.

Please visist http://www.skepticsunite.com/ if you would like to help. We know Robert will be extremely grateful.

Robert is one of those people that rings true every time. He really is the kind of guy he seems to be. He shows us all that one man can make a big difference, and we need him. Please be as generous as you can so that he might be back on the front lines as soon as possible.

Thank you,

Jeff Wagg
